## DETAILED ACTION

### *Double Patenting*

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1-59 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 1-6 of U.S. Patent No. 6531613. Although the conflicting claims are not identical, they are not patentably distinct from each other because the USP'613 teaches the claimed compound. See claims. The claims of the patent do not specifically teach that such compound may be used in articles that include polymers. However, the prior art of USP'613 specifically teaches that thioxanthone dyes may be used with the plastic materials. See Column 1, lines 10-30. It would have been obvious to one having ordinary skill in the art at the time of the invention to use the claimed compound in polymer articles such as film,

matrix and laminate, since such claimed compound would have improve solubility in polymers as compared to the known in the art similar compounds. Also, it would have been obvious to optimize properties of host polymers , since discovering the optimum or workable ranges involves only routine skill in the art.
